

PRIMING YOUR MELINE™ AIRLESS PUMP

This MELINE™ product uses an airtight vacuum seal for precise and consistent dispensing. This seal also protects from oxidation and contamination, **extending product life.**

Before use, sufficient pressure must be built. This is called priming (steps below)

step 1

Keeping the cap on, turn the bottle upside down and **firmly tap** (4-5 times) into the palm of your hand.

step 2

Remove the cap and depress the **pump several times** until product is dispensed. This may take up to 10 to 15 pumps*

**If the above method does not work, please repeat. Due to the precise calibration of these pumps, this may take multiple attempts.*
